

# PROJECT NAME: CHINA GULCH FUELS REDUCTION

SIZE: 530 ACRES

**PROJECTED COMPLETION DATE:**  
12/19

**LOCATION:**

Near the communities of Happy Valley, Redding, and Anderson. Within the County of Shasta in CAL FIRE's Shasta-Trinity Unit. This project is located along the ridge south of Clear Creek, between Hwy 273 and the Shasta County Landfill.

**Summary:** This project would create a shaded fuelbreak along the ridge south of the Clear Creek drainage and along portions of the following county roads; China Gulch Rd, Cloverdale Rd, Clear Creek, Canyon and Sun Setter. The fuel break will remove the understory brush (manzanita, Ceanothus, toyon and liveoak), increase spacing of the over-story oaks and Grey pines, and will also remove standing dead and damaged vegetation that have resulted from several fires that have occurred during the past decade. By removing the dead fuels and treating the live fuels the project will create a safer community for residents as well as provide a safer transportation route in the event of an emergency.

**What communities or habitats will project protect?** Happy Valley, Redding, Anderson and Igo.
