

PROJECT NAME: WEST REDDING FUELS REDUCTION

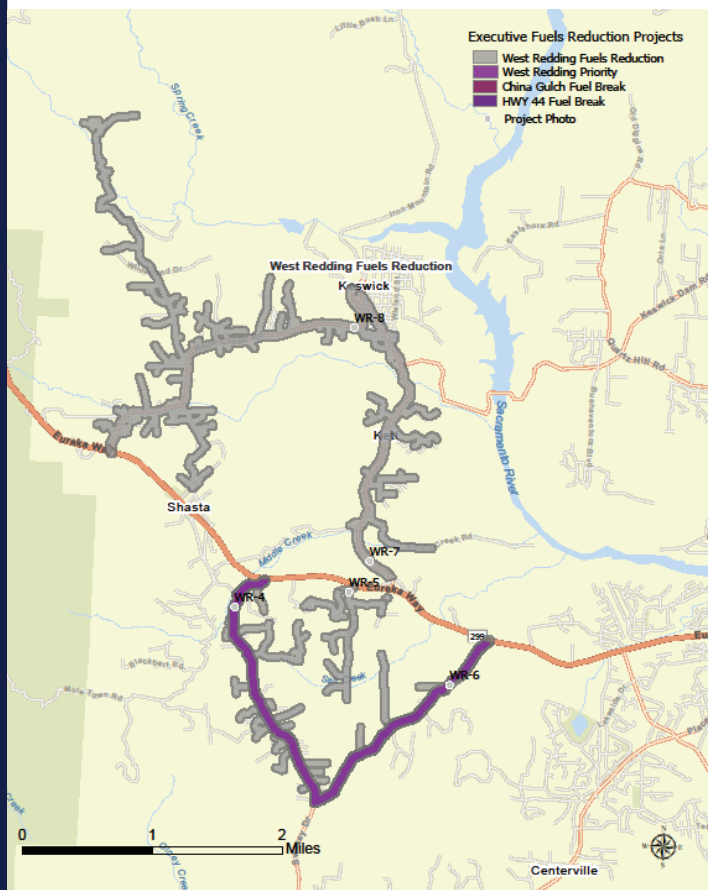

SIZE: 3,091 ACRES

PROJECTED COMPLETION DATE:
12/19

LOCATION:

Near the community of Shasta, within the County of Shasta in the CAL FIRE Shasta-Trinity Unit. Major and Minor road systems within the Carr Fire footprint. West of Redding California.

Summary: This project will remove burned vegetation and hazard trees left by the Carr Fire in addition to using major and minor road systems as fuel breaks for future fires in the area. By reducing or eliminating the burned vegetation, the project will increase accessibility to areas that fire fighting resources will need in the future and decrease the availability of dead fuels. The fuel treatment in live fuels will increase the likelihood that fire fighting resources will be able to utilize existing roadways as fire breaks. The project will create a safer community for residents and give fire fighting resources the upper hand when combating wildfire in the future.

What communities or habitats will project protect? West Redding, Shasta, Victoria Highlands, Lower Springs, Rock Creek, Keswick.
