

COMMUNITIES AT RISK FROM WILDFIRE

- Communities at Risk from Wildfire on Federal Lands
- Communities at Risk from Wildfire on non-Federal Lands
- State or Local Government Ownership
- Federal Ownership
- Assembly District Boundaries

The Communities at Risk dataset represents communities which are identified as having some lands at high risk of house/structure damage from wildfire. These high-risk communities are within the wildland-urban interface, that is, the area where homes are close enough to wildland vegetation to be within fire's reach, defined here as within 0.5 to 1.5 miles of areas of High or Very High wildfire threat (determined from CDF-FRAP fuels and hazard data). The variable buffer distance models the influence of different fuels between the source threat and the developed areas (non-fuel areas, such as water reduce the effective buffer distance). Once identified, these communities can receive funding through the National Fire Plan.

This map reflects analysis using the best available data as of 2015.
