

Intro Meetings for the JDSF Management Plan - October 21 (Fort Bragg) and October 22 (Ukiah)

Chart Paper Notes from Facilitated Break Out Groups

Successes

- Conducting Archaeological surveys
- Pause on THP for 3 years
- Community pressure showing results in activating new plan
- Sustaining local milling facilities
- coalition of environmental community with tribal community
- love horse camp
- Valuable research, Caspar paired watershed study
- Diverse employment
- Attempts to include Tribal voices
- Engaging with recreational users to improve access
- The amount of natural resources available to the public
- Horse access and recreation
- Forest is accessible to the public
- Harvest and recreation together
- Air
- Stream and watershed restoration
- Successful riparian road decommissioning
- largest state forest
- grows more than is harvested
- upgrades to affordable campsites
- open roads
- large scale community forest model
- Variety of different management activities
- great access
- Previous FMPS created a world class forest
- Research you normally don't see
- Trail building
- road and trail use freedom with pets
- sustain yield success, good inventory
- Keep improving for fire resiliency
- Increasing public involvement
- Can point to language in plan for discussion
- Accessible online
- larger trees and larger volume than private holdings
- Policy declaration of ancestral lands owned by the state
- Tribal co-management of ancestral lands owned by state at the state level AB52
- Indian cultural resources incorporated into CEQA
- establishment of large coalition support for Tribal Co-mgmt and protection of wildlife

- Some protection for sacred sites
- Big trees

Challenges

- Attracting talent and staff/Housing challenges
- Timber economy's impact locally, jobs and supporting services, currently not demonstrated
- listening to public and responding healthy dialogue
- Effectively incorporating tribal input
- climate change
- garbage dumping
- public relations- multi social media communicate mission of JDSF
- growing large trees as goal for carbon sequestration
- fire resilient treatments near neighborhoods
- fire resilience in general
- mission to include cultural and climate evolution
- language is vague
- definition of sustainability is outdated
- no accountability
- harvest return interval too frequent
- communication with public
- transparency and understanding of history and possibility
- how to have statewide importance and impact
- lack of information shared by agencies on the impact of Native American resources
- Public input doesn't seem to affect change
- CalFires intimidating presence at public meetings
- lack of independent professional archeology doing the cultural resource review
- Small tribes and community going up against a big agency
- Mandate that requires commercial logging in JDSF
- Cut trees in the forest and left mess
- clearcuts bad for streams and salmon
- Include CEQA w/ forest practice rules in FMP
- Tribal representatives selected by tribes Not by JAG/Calfire
- None of the language in FMP is binding ex caspar marked trees over 40" DBH, no research \$
- No research budget
- How is research communicated
- Maintaining confidence that industry will still be interested in bidding and confidence in public
- Fast biking
- Implementing specific recommendations of Betts archaeological report
- reliable info for horse riders to know where hauling is occurring
- damage to arch due to maintenance and construction of forest roads
- expand arch to include cultural landscape

- RPF conducts arch survey versus independent archaeologist
- Project notification to tribe have short timeline and no financial assistance
- Damaging mushroom harvest
- tribes as advisory vs. equal voice
- Who will respond to public comment
- bike trails not being reviewed under CEQA
- Slash left by logging
- Erosion
- Funding outside of logging
- Funding for tribal engagement
- Outreach about opporutnites and pre/post harvest tours
- Viewing forest as living entity vesus resource
- Keeping oxygen producers in the forest
- Lack of transparency about different interest groups (tribal)
- Including CEQA in mgmt plan
- Capitalism and resource extraction economies
- More clarity on size limit for cutting and limits
- Manicure don't cut
- illegal trailbuilding
- Shooting range trash/lead in dangerous locations
- Protection of sacred native sites
- protection and restoration fo wildlife habitat
- protecting large trees
- tan-oak stewardship
- focus on firs no redwoods

Ways to Improve

- Broader arch-cultural landscape
- erratic flow of logs affects mills
- Implement AB-52 and AB 1284
- Independent arch survey prior to logging
- Access to records for tribes
- Co-Management
- More trails that are not roads with signage
- Signs stating whether trails are accesible
- Thinning vs removing larger diameter trees
- Remove commercial logging
- More acces to research from Jackson
- address aesthetics after logging
- More selective if taking larger trees
- incorporate prescribed burning/involve local tribes in burning

- restore access to trails, connect existing routes after harvest
- don't cut old growth
- Contact outside orgs for opportunities
- Better education about what happens in THP and during projects
- Bring native folks and public together
- Report back to the public clearly
- Stop logging
- Public information office to have contact
- Clarify tree selection process
- Forest science education
- Hiring local tribes to work on projects
- No clearcuts
- broom management and pampas grass
- Follow BETTS report to protect arch sites
- consider JDSF cultural landscape under CEQA
- more specific language
- increased outreach--newspaper, radio, social media
- organize more walking tours on weekends
- more democracy
- meeting when people are not at work
- Repeat meetings
- Update scientific models to account for climate change regarding timber harvest
- Find funding outside of timber income
- honest communication
- no winter operations
- accelerating shaded fuel breaks
- public consensus prior to plan implementation
- public collaboration
- promoting successes to public
- Have accessible demonstration sites
- logging sites should have signage
- Research readily accessible
- Educational tours
- Research should have funding for public outreach
- small diameter wood harvest
- Clean up after logging
- Allow forest to be wild
- Start with local tribal representation
