Public Resources Code 4201-4204 directs the California Department of Forestry and Fire Protection (CAL FIRE) to map fire hazard within State Responsibility Areas (SRA) based on fuel loading, slope, fire weather, and other relevant factors present, including zones where wildland fire has been identified by the Department as a major cause of wildfires. These zones, referred to as Fire Hazard Severity Zones (FHSZ), classify a wildland zone as Very High, High, or Moderate hazard based on the average hazard across the area included in the zone.
